

QAS Phone Append

Match names and addresses to phone numbers

QAS Phone Append uses a name and postal address to append a land line phone number for both consumers and businesses. It quickly finds phone numbers by matching against our database, sourced directly from over 2,600 telecommunication companies.

The Experian QAS database provides full coverage, including 99.97% of all residential and business directory assistance listings and receives over two million daily updates. The data accuracy rate is confirmed by independent audits at a rate of 99%.

Match rates are 50% on average with unparalleled phone connectivity. There are no set-up or run fees and pricing is based on a per-match basis. Once you have the phone number, you own it.

QAS Phone Append

To best utilize QAS Phone Append services, businesses can send a file containing names and postal addresses to Experian QAS. Within 2 business days, we will match the file and send it back. Reverse phone append is also

available to match names and postal addresses to a list of phone numbers.

Benefits of Phone Append

Accelerate telemarketing
Maximize efforts with high data quality, superior match rates, and fast turnaround time.

Enhance your contact database

By adding valid phone numbers, increase the size of your database and reach a greater number of prospects.

Maximize results

Experian QAS establishes about 50,000 new residential connections and 8,000 new business connections per day through our updates system.

Identify errors instantaneously

QAS Phone Append verifies numbers at the point of entry to identify possible errors so they can be fixed immediately.

Valuable additional information

Phone numbers are area-specific and indicate geographic information such as customer location and time zone. Target your customers with accurate geographic data.

Customizable integration

Choose how QAS Phone Append can be implemented within your current systems and help increase validity of phone numbers.

Front-end validation and back-end bureau services available

Validate phone numbers during data entry via a Web Service and cleanse existing numbers as a bureau service.

Improve data quality

As part of any thorough contact data management strategy, a continually updated database plays a vital role in improving the overall quality of your contact data.

A relatively short installation and configuration process allows the product to be easily tailored to the customer's requirements.

Also Available from QAS

QAS Email Append matches customers names and postal addresses to find email addresses. Experian QAS provides both consumer and business email append. Reverse email append services are also available from Experian QAS.

QAS Automated Email cleans email files on a nightly, weekly, or monthly basis for companies unable to utilize a real-time solution.

QAS Batch is designed to clean and enhance records as well as maintain the validity of those records over time.

QAS Pro validates addresses against official postal authority records before entry into any database. By automatically filling in address fields, QAS Pro can save up to 75% of the time needed to enter a full, valid address.

QAS Pro Web is a scalable and easy-to-implement Web Service with support for XML, SOAP, J2EE, and .NET standards. It is simple to integrate into websites, browser-based applications and thin-client environments. Full sample code is provided for AJAX, ASP, JSP, c#.NET, VB.NET, ASP.NET and PHP.
